

## How to read the robot rulebook

The rulebook is really important and can be really helpful but also can cause you to lose points if you're not careful. Be sure to read through the rulebook carefully at the beginning of the season.

- The rulebook can be found in the coaches packets or at <https://www.firstlegoleague.org/>.
- Watch the robot game video to understand the general season.
- Read through the entire packet and make sure you understand how you can score points and what different ways you can score.
- Find the most effective way to score each mission.
- Look for ways to score to double points.
- Make sure how you are scoring is legal and allowed. Scoring points in ways that are not allowed will cause stress and surprise during competition. Along with disappointment when your team doesn't score the points they thought should have.

Missions

**Mission 07 WIND TURBINE**

Renewable energy from the wind is used to turn the turbine blades and generate electricity.

Release the energy units from the wind turbine.

• If an energy unit is no longer touching the wind turbine: **10 EACH**

10 + 10

**Mission 08 WATCH TELEVISION**

Energy consumption in our homes is part of everyday life, such as watching the television.

Raise the television screen and move the energy unit to the television slot.

• If the television is completely raised: **10**

• If an energy unit is completely in the green television slot: **10**

*The watch television model and the energy unit in the green television slot may not be touching team equipment at the end of the match.*
